

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

Creating the multi-line comments with the parameters.

Converting the the button element and HTML element into a factory function

---

2. What parts of encapsulating your logic were hard?

Deciding whether to convert the for of loop into a function but besides that it was fairly easy.

---

3. Is abstracting the book preview a good or bad idea? Why?

Good idea, the book preview element function was used multiple times in the code

---
